Task-3

The image displays three sequential screenshots of a Python code editor, illustrating the development of an Expense Tracker application. Each screenshot shows the code on the left and the output on the right.

Screenshot 1: The code defines a list `expenses` and a `while` loop for the main menu. The menu options are: 1. Add Expense, 2. View Expenses, 3. Search by Category, 4. Category Total, 5. Monthly Total, and 6. Exit. The user enters choice 1, and the program prompts for description, amount, category, and month. The output shows the menu and the user's input.

Screenshot 2: The code continues with the `if` statement for choice 1, where the user's input is stored in the `expenses` list. The output shows the menu and the user's input, followed by the message "Expense Added Successfully!".

Screenshot 3: The code continues with the `elif` statement for choice 2, which prints all expenses. The output shows the menu and the user's input, followed by the message "Expense Added Successfully!".

Screenshot 4: The code continues with the `elif` statement for choice 3, which searches for expenses by category. The output shows the menu and the user's input, followed by the message "Expense Added Successfully!".

Screenshot 5: The code continues with the `elif` statement for choice 4, which calculates the category total. The output shows the menu and the user's input, followed by the message "Expense Added Successfully!".

Screenshot 6: The code continues with the `elif` statement for choice 5, which calculates the monthly total. The output shows the menu and the user's input, followed by the message "Expense Added Successfully!".

Screenshot 7: The code continues with the `elif` statement for choice 6, which exits the program. The output shows the menu and the user's input, followed by the message "Expense Added Successfully!".

for e in expenses:

if e["month"] == month:

total += e["amount"]

print(f"Monthly Total for {month}: ₹{total}")

elif choice == "6":

print("Thank you!")

break

else:

print("Invalid Choice!")

Enter month (YYYY-MM): 2026-05

Monthly Total for 2026-05: ₹0

===== Expense Tracker 2.0 =====

1. Add Expense

2. View Expenses

3. Search by Category

4. Category Total

5. Monthly Total

6. Exit

Enter your choice: 6

Thank you!
